FEDERATED SEARCH SERVICE

NEW AND IMPROVED!

"In this day, when students are so wired and are accustomed to using Google and other Internet search engines, instant response is expected. Serials Solutions delivers paid content to the user in the best way. We value them as a partner."

Lori Phillips
University of Wyoming Libraries

NEW AND IMPROVED!

The best of the world's leading federated search services—360 Search and WebFeat®—combined in the single most powerful solution

COMPELLING DISCOVERY SOLUTIONS ATTRACT PATRONS TO CREDIBLE LIBRARY CONTENT

Are your patrons faced with searching each library resource using its own unique platform? Without a discovery tool to make it easy, patrons often get confused and frustrated, and ultimately abandon the process in favor of Web search.

THE PROVEN SOLUTION KEEPS GETTING BETTER

Federated search is a simple and proven starting point for research. With a single query patrons can comb all resources at once, including the OPAC, and receive the results consolidated and sorted in one easy-to-use interface.

The new 360 Search service represents over ten years of

development. It is the product of combining the world's two leading federated search engines - 360 Search and WebFeat - into the single, most feature-packed and powerful service.

360 SEARCH IS FLEXIBLE, PORTABLE, AND CUSTOMIZABLE

The 360 Search experience can be tailored to accommodate all levels of users and you can customize the user interface to best represent your collection. You can customize the look and design and embed search boxes in any of your institution's web pages.

360 Search integrates with any OpenURL link resolver, RefWorks, Blackboard, and AquaBrowser discovery layer to provide a seamless and comprehensive resource discovery experience. You also can embed 360 Search into your own applications and user interfaces using the open source XML API for 360 Search.

CONNECTORS ARE FUNDAMENTAL TO SUCCESSFUL SEARCH EXPERIENCES

360 Search delivers accurate and stable connections to more than 5000 resources. Serials Solutions has

established strong relationships with resource providers to develop and maintain the quality of our connectors. These connectors are built to controlled standards and tested and approved by resource providers.

"FULL-TEXT" AND "PEER-REVIEWED" FILTERS IMPROVE RESEARCH EXPERIENCES

Using a combination of data supplied by the Ulrich's™ Global Serials Intelligence knowledgebase and the Serials Solutions KnowledgeWorks knowledgebase, these search filters enable users to limit the results of queries to full-text or peer-reviewed sources more reliably than ever before. Most other filters rely solely on data supplied by content providers, which introduces errors. 360 Search is able to take advantage of the authoritative knowledgebases for serials and thereby deliver accurate results.

THE BEST KEEPS GETTING BETTER

The best of the world's leading federated search services—360 Search and WebFeat®—have combined to create the single most powerful solution Robust administrative functionality

- Proven results clustering
- Subject specific "Quick Search" boxes
- Huge connector library
- Extensive customization options
- Interoperability with other services, including OpenURL linking and discovery interfaces
- The highest quality library service and support for customization, implementation, and training
- Over ten years of experience

CONSORTIUM SUPPORT EXTENDS THE VALUE

The screenshot shows the 360 Search interface with a search bar at the top. Below the search bar, there are navigation links: Library Home, Hours, A-to-Z List, Site Map, and Contact Us. The main search area has tabs for Topics, Date, Resources, and Authors. A list of search results is displayed, including titles like 'Committee, Hearing (21)', 'Review (21)', 'Dioxide (20)', 'Electronic resource (19)', 'Global Warming Bill (19)', 'Agency (17)', 'Kyoto, Protocol (16)', 'Heat (15)', 'Global Warming Potential (14)', 'Fight Global Warming (13)', 'Against global warming (12)', 'Storm, Tropical (12)', 'Prevention of the Global Warming (11)', 'Effect of global warming (10)', and 'Global Warming Trend (10)'. There are also filters for 'Full Text' and 'Peer-Reviewed'.

Results clustering and facets help patrons find answers fast. 360 Search "defragments" results into meaningful clusters. Resource, Date, and Author facets help patrons drill down to specific items. Full-Text and Peer Reviewed filters enable users to further refine their results.

FEATURES

- Proven product**
WebFeat originated the category and 360 Search extended it with the first results clustering feature
- Connection technology**
Our proprietary connection development framework delivers accurate, reliable content neutral connections
- Administration Console**
Enjoy Web-based branding and configuration control so you can manage the service from any location
- Customization**
Match the look and feel with of your library's brand and design; tailor your interface to deliver the best patron experience at your

library; embed search boxes in any library and department/subject web page

- Consortium Support**
Centralize management of shared resources; brand and design to match the consortium
- True keyword search**
Requires no special syntax
- Results Clustering**
Receive valuable, content-specific, natural language clusters to help refine results
- Full Text and Peer Reviewed Filters**
Further refine results to hone in on the most useful content

- Fast results**
Search up to 300 resources simultaneously and quickly receive all results
- Article level links**
Click to link immediately to full text without an intermediary pages
- Click-Through Statistics**
Count how often patrons use your journals and databases
- XML API**
Integrate 360 Search with your own user interfaces and applications
- Affordable**
Receive more connections per dollar invested
